INTRODUCTION

Dear Customer

Your Mynute boiler has been designed to meet and exceed the very latest standards in gas central heating technology and, if cared for, will give years of reliable use and efficiency. Please therefore take some time to read these instructions carefully.

Do's and Don'ts

- **Do** ensure that the system pressure is periodically checked
- **Do** ensure that you know how to isolate the appliance in an emergency
- **Do** ensure that you are familiar with the appliance controls
- **Do** ensure that your installer has completed the appliance log book
- **Do not** attempt to remove the appliance casing or gain internal access
- **Do not** hang clothes etc. over the appliance
- **Do not** forget to have the appliance serviced annually.

- 2 Mode selector switch
- 3 Fault indicator led
- 4 CH position
- 5 Timeclock aperture (optional)

THINGS YOU SHOULD KNOW

1.1 GAS APPLIANCES

In the interests of your safety and that of others it is a requirement that all gas appliances are installed and correctly maintained by a competent person and in accordance with the latest regulations.

1.2 ELECTRICAL SUPPLY

Please ensure that this appliance has been properly connected to the electrical supply by means of a double pole isolator or un-switched socket, and that the correct size of fuse (3 amp) has been fitted.

Warning: This appliance must be earthed!

1.3 GUARANTEE REGISTRATION CARD

Please take the time to fill out your guarantee registration card. The completed warranty card should be posted within 30 days of installation.

1.4 HOW DOES IT WORK?

Your Mynute boiler is a central heating boiler, which supplies heated water to your radiators and hot water cylinder.

It is controlled by the time clock or programmer and any thermostats that your installer may have fitted.

The Mynute lights electronically and does not have a pilot light.

In the unlikely event of a fault developing with your boiler, the supply of gas to the burner will be terminated automatically.

BELOW	150mm
SIDES	12mm
FRONT	600mm

GETTING STARTED

2.1 BEFORE SWITCHING ON

Before switching the appliance on please familiarise yourself with:

- how to isolate the appliance from the gas, water, and electricity supplies
- how to check and top-up - if necessary - the system water pressure
- the time clock or programmer
- any external thermostats and their functions
- the appliance controls.

2.2 APPLIANCE CONTROLS (see fig. 1)

The appliance controls are concealed behind the front flap. To gain access to the controls simply lift upward to engage the holding clip.

The appliance has a mode switch, variable thermostat, system pressure gauge and an aperture for an integral clock or programmer. The mode switch has three positions:

- Reset
- Off
- On

The variable thermostat allows you to set the temperature of the water to your radiators and hot water cylinder (not the hot water to your taps!) between 40°C (min) and 80°C (max).

The pressure gauge shows the current pressure of the system, the gauge should be set between 1 and 1.5 BAR. When the appliance is operating the gauge may rise or fall slightly, this is quite normal. The minimum permissible level for the safe and efficient operation of the appliance is 0.5 bar. Should the pressure fall below 0.5 bar, the boiler shuts off automatically.

Depending on the type of controls specified by your installer you may have an integral Vokera time clock or programmer fitted to the appliance, if so, instructions can be found on pages 6-10. If an external time clock or programmer has been fitted, please refer to the instructions supplied with such.

2.3 LIGHTING THE BOILER

Ensure the gas and electrical supply to the boiler are turned on.

Turn the mode switch to the 'on' position. Refer to the particular instructions for the type of programmer or time clock fitted and ensure there is a demand for heating and/or hot water. If there is a room thermostat and/or hot water cylinder thermostat you should ensure these are also calling for heat.

When there is a demand for heating and/or hot water via the above controls the boiler will go through an ignition sequence, whereby the burner will light.

If the appliance fails to ignite during the ignition sequence, allow a period of two minutes before re-setting.

To adjust the output temperature of the appliance turn the thermostat knob clockwise to increase or anti-clockwise to decrease.

When the appliance reaches the set temperature, the burner will go off for minimum period of approximately 3 minutes.

When the programmer/time clock or external thermostats heating request has been satisfied, the appliance will switch off automatically.

HOW TO...

3.1 HOW TO TOP-UP THE SYSTEM PRESSURE (fig. 2)

The system pressure must be checked periodically to ensure the correct operation of the boiler. The needle on the gauge should be reading between 1 and 1.5 bar when the boiler is in an off position and has cooled to room temperature. If the pressure requires 'topping-up' use the following instructions as a guide.

- Locate the filling valve connections (external to the boiler).
- Attach the filling loop to both connections.
- Open the filling valve slowly until you hear water entering the system.
- Close the filling valve when the pressure gauge (on the boiler) reads between 1 and 1.5 BAR.
- Remove the filling loop from the connections.

3.2 HOW TO RESET THE APPLIANCE

When the reset light is illuminated the appliance will require to be reset manually. Using the mode switch, turn it two clicks to the left (reset position) then turn it back to the 'on' position.

Allow a period of two minutes to elapse before turning the mode switch to the reset position.

IMPORTANT

If the appliance requires to be reset frequently, it may be indicative of a fault, please contact your installer or Vokera Customer Services for further advice.

3.3 HOW TO SHUT DOWN THE SYSTEM FOR SHORT PERIODS

The system and boiler can be shut down for short periods by simply turning the programmer or time clock to the off position (see pages 6-10 or the instructions supplied). It is also advisable to turn off the main water supply to the house.

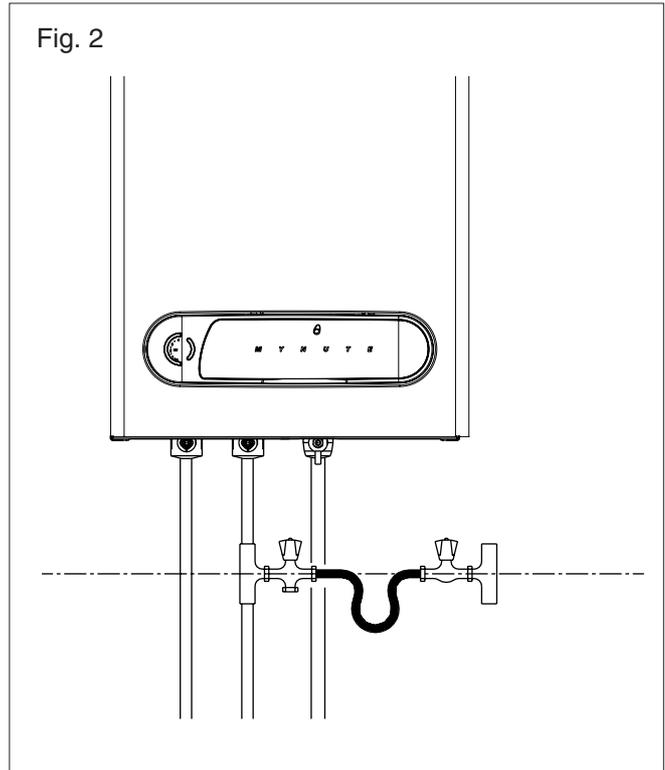

3.4 HOW TO SHUT DOWN THE SYSTEM FOR LONG PERIODS

If the house is to be left unoccupied for any length of time – especially during the winter – the system should be thoroughly drained of all water. The gas, water and electricity supply to the house should also be turned off. For more detailed advice contact your installer.

3.5 HOW TO CARE FOR THE APPLIANCE

To clean the outer casing use only a clean damp cloth. Do not use any scourers or abrasive cleaners.

Fig. 2

WHAT IF...

4.1 WHAT IF I SUSPECT A GAS LEAK

If you suspect a gas leak, turn off the gas supply at the gas meter, and contact your installer or local gas supplier. If you require further advice please contact your nearest Vokera office.

4.2 WHAT IF I HAVE TO FREQUENTLY TOP-UP THE SYSTEM

If the system regularly requires topping-up, it may be indicative of a leak. Please contact your installer and ask him to inspect the system.

4.3 WHAT IF THE RESET LIGHT IS ON

If the reset light is on it indicates that the boiler has failed to ignite or has overheated, when this happens the boiler automatically shuts down and requires to be reset manually (see 3.2).

4.4 WHAT IF THE APPLIANCE IS DUE ITS ANNUAL SERVICE

Advice for tenants only

Your landlord should arrange for servicing.

Advice for homeowners

Please contact Vokera Customer Services **05655057** if you would prefer a Vokera service engineer or agent to service your appliance. Alternatively your local Bord Gas approved engineer may be able to service the appliance for you.

4.5 WHAT IF I NEED TO CALL AN ENGINEER

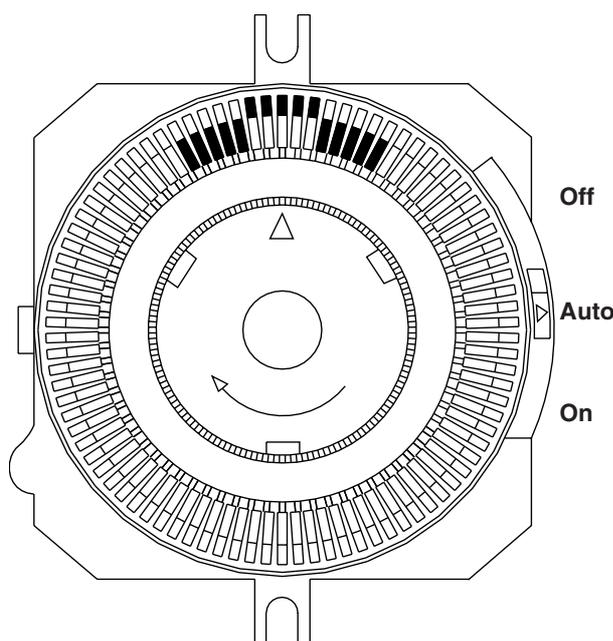

If you think your boiler may have developed a fault please contact your installer or Vokera Customer Services **05655057** have all your details to hand including full address and relevant contact numbers.

VOKERA TIMECLOCKS

5.1 VOKERA TIME CLOCK

These instructions relate only to the Vokera mechanical time clock. If you have a time clock that is fitted external to the boiler then you should refer to the instructions supplied with such. If in doubt, contact your installer for further advice or assistance.

Fig. 3

Setting the time

The time of day can be set by grasping the outer edge of the black dial and turning it in a clockwise direction until the correct time is in line with the white pointer.

Setting the 'switching times'

The 'ON' periods are set by sliding the black tappets, adjacent to the time periods required, to the outer edge of the dial.

The tappets that remain at the centre of the dial will be the 'OFF' periods.

The smallest switching time (ON or OFF) is 15 minutes.

To select 'Auto' mode move the selector switch in central position.

To select 'On' mode move the selector switch in the bottom position.

To select 'Off' mode move the selector switch in the upper position.
